

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

YEARLY SUBSCRIPTION, \$3.00

IMPORTANT NEW BOOKS

Mechanism of Mendelian Heredity

By T. H. MORGAN, Professor of Experimental Zoology in Columbia University, A. H. STURTEVANT, H. J. MULLER and C. B. BRIDGES, also of Columbia. xiii+262 pages. 8vo. \$3.00.

The book is intended for class work in genetics. It deals with the fundamental principles of Mendelian heredity, such as segregation, linkage, sex, multiple factors and the factorial hypothesis. The treatment of these topics is such that students of zoology and botany will have no difficulty in comprehending them.

In the appendix are given directions for breeding *Drosophila*, the most available material for class work in genetics.

Locy's Biology and Its Makers

New Edition

By WILLIAM A. LOCY, Professor in Northwestern University. xxvi+477 pp. 8vo. Illustrated. \$2.75 net.

In this third revised edition, several alterations have been made, the original form is substantially retained. Several pages have been rewritten to convey more clearly the meaning, as in reference to Mendel's discovery, and some additions have been made, as comments on isolation and orthogenesis as factors of organic evolution. The important contributions of Fritz Schaudinn have been noted and the discussion of the antiquity of man has been considerably extended. Several new portraits have been substituted for those of the earlier editions.

More's The Limitations of Science

By LOUIS T. MORE, Professor of Physics in the University of Cincinnati. 268 pp. 12mo. \$1.50 net.

The purpose of the book is to show how scientists have steadily extended our knowledge of natural phenomena and laws, and how they have also created a most complicated and purely metaphysical world which has no resemblance to the world of our sensations. Many scientists claim that this making of hypotheses is a necessity; and others, that it is useful, although the conclusions derived from these speculations are false. Both of these claims are discussed in the first five chapters. The next chapter deals with the effect of this method on men of science. In the last chapter, the relation of hypothesis to science in general is considered. The question is asked whether scientific sociology and scientific ethics are advisable, or even possible.

The author's contention is in accord with Bergson's Philosophy as to the limitations of the human intellect.

Revisions of Important Text-Books

Thompson's Elementary Lessons in Electricity and Magnetism

By SILVANUS P. THOMPSON. Revised by the author

Cloth, crown octavo, xv + 706 pp., 377 illustrations. \$1.50.

After a wide use for twenty-one years, this book now comes from the press in a completely revised form, which incorporates the progress of the science during this period, and brings the treatment abreast of the most recent developments in theory and practice.

Not only have the various topics taken up in the older book been brought to date and expanded where necessary to meet the needs of teacher and student, but the newer phases of the subject have been covered in the same clear direct manner which made the earlier volume popular as a text.

Entirely new chapters are devoted to the Electron Theory, to Wireless Telegraphy, to the Transmission and Distribution of Power, and to Electric Traction. In fact, progress in the development of the industrial applications of electricity has been so great in the past decade as to necessitate the remodeling of the latter half of the book. Throughout the book modern progress in construction and industrial application is described and illustrated by many drawings.

The general appearance of the new edition is much more attractive and serviceable than that of the old edition. The type is much larger, the space between lines is greater, and the number of illustrations has been increased by over 25%. Not only has the size of the page been increased, but the number of pages has also been increased by about ten per cent. Although these changes have involved a very heavy increase in manufacturing expense, the retail price is only ten cents more than that of the old edition. The price has been kept unusually low in order to make it possible for instructors to require students in the first general college course on physics to purchase this book in addition to the textbook on general physics.

"I think the book, as revised, will be very satisfactory, and, as far as I can judge from a careful inspection, it will meet the requirements of the present day as well as the earlier editions ten or fifteen years ago met the requirements of that day. To a certain extent perhaps a book written at a later date cannot quite meet this requirement because of the growth of the subject treated, but I think the present volume does very well."—Professor C. R. Cross, Head of the Department of Physics in the Massachusetts Institute of Technology.

Huxley's Lessons in Elementary Physiology

By THOMAS H. HUXLEY, Revised by Joseph Barcroft,
King's College, Cambridge.

Cloth, 12mo, xxiv + 604 pp., 185 illustrations. \$1.60

A thorough and substantial revision of this historic masterpiece, in which new material and additional illustrations have been included and further text-book apparatus provided. The manner in which Professor Barcroft has made this revision is best described in his preface, from which we quote:

"In approaching the revision of 'Huxley's Physiology,' my feelings have been similar to those of an architect to whom is entrusted the restoration of a historic building designed by a master hand.

Written by Huxley, the book was revised, and in fact almost rewritten, by Foster. The former was as great a writer as any scientist of his time, the latter may almost be said to have created English Physiology.

To 'restore' the work of these men from the dilapidations made by two decades of scientific progress is the task now entrusted to me. The sense of responsibility with which I approach it is, if possible, heightened by the affection which I have for the memory of Foster, who was my master.

I have faithfully left untouched any portion of the fabric in which there was not an actual flaw; but where the structure needed repair, it seemed to me due not only to the readers of the book but to the memory of the author, that the repair should be thorough, substantial, and simple. Such have been the principles on which I have tried to carry out my work."

Ridpath's History of the World

"The Work of the Century"

JOHN CLARK RIDPATH'S History of the World is unquestionably the greatest literary work of the nineteenth century. Other men have written great histories of single countries or periods—Gibbon of Rome, Macaulay of England, Guizot of France—but it remained for Dr. Ridpath to write a complete History of the entire World, from the beginning of civilization down to the present time.

A Quarter of a Million Sets Sold

The sale of this great work exceeds that of any other set of books published in America. Over 250,000 sets have gone into American homes, and every purchaser is more than satisfied. It is strongly endorsed by scholars and statesmen; business and professional men, and by the thousands of owners, as the

greatest history ever written. We are closing out the remaining sets of the last edition

AT A VERY LOW PRICE AND EASY TERMS

We will name our special low price and easy terms of payment and mail the beautiful free sample pages to all who ask for them. A coupon for your convenience is printed on the lower corner of this advertisement. **Tear off the coupon, write name and address plainly, and mail now before you forget it.** Dr. Ridpath is dead, his work is done, but his widow derives her support from the royalty on this History, and to print our low price broadcast for the sake of more quickly selling the sets at our disposal would cause great injury to future sales. Mail the coupon now.

Review of Reviews

says: "The reader feels himself in the hands of a great historian whose authorship shows singular breadth of view and sanity of judgment."

Boston Post said: "John Clark Ridpath is above all things an historian. His history is accepted as standard in schools, colleges and homes."

Christian Herald

said: "No other work has ever supplied a history so well suited to the needs of all men. We cheerfully commend this most popular and complete of all world histories to our readers."

2000
PICTURES
4000
PAGES

THE REASON for Dr. Ridpath's enviable position as an historian is his wonderfully beautiful style, a style no other historian in any generation has ever equaled. He pictures the great historical events as though they were happening before your eyes; he carries you with him to see the battles of old; to meet kings and queens and warriors; to sit in the Roman senate; to march against Saladin and his dark-skinned followers; to sail the Southern Seas with Drake; to circumnavigate the globe with Magellan; to watch that thin line of Greek spearmen work havoc with the Persian hordes on the field of Marathon. He combines absorbing interest with supreme reliability and makes the heroes of history real living men and women, and about them he weaves the rise and fall of empires in such a fascinating style that history becomes as absorbingly interesting as the greatest of novels. Hundreds who read this have decided to buy Ridpath some day; now is the time.

School and Society

Under the title "A School Journal at Last" the *Newarker*, published monthly by the Newark Free Public Library, says:

At last we have a weekly journal devoted to the subject of education which the average intelligent citizen can read with pleasure and profit. It is not devoted to primary methods. It does not tell how to teach arithmetic. It is not too philosophical, or too theoretical, or too dismally practical. It is simply a sensible weekly journal which covers the whole field of education in an agreeable, rational and illuminating manner.

It is called *School and Society*. It is edited by J. McKeen Cattell. It is published by the Science Press, Lancaster, Pa., and Garrison, N. Y. This same press publishes, and this same editor edits the weekly journal called *SCIENCE*. *School and Society*, in its field, is as good a journal as *SCIENCE*, in its field, which is saying much.

Principals, assistant principals, high-school teachers, and the teachers in the higher grades can find a better source of information and enlightenment elsewhere.

The library at present takes one copy of this magazine. If teachers and others make requests for it, the library will take a number of copies and lend them, so desirable does it seem that a journal of this kind be widely read in our city.

A leading editorial article in the *New York Evening Post* begins:

With the opening of the new year an interesting addition was made to the already large list of American journals devoted to educational questions. *School and Society*, which forms the third periodical of somewhat kindred nature edited by Dr. J. McKeen Cattell—the other two being *SCIENCE* and *The Popular Science Monthly*—aims to combine the functions of a professional journal for those engaged in educational work and a medium of interesting information and discussion for "the wider public for whom education is of vital concern."

What strikes one, above all, in reading the early numbers of *School and Society* is the enormous range of the subjects which, within the past decade or two, have become live topics in educational discussion. Indeed, if it was the editor's purpose to produce this impression without a word of editorial flourish—for he adds nothing to the extremely brief announcement of purpose in the advertised prospectus—he has adopted an extraordinarily effective method of doing so in using as the initial article of the journal President Eliot's address at the inauguration of Dr. Finley as Commissioner of Education of the State of New York.

Heredity and Environment

in the

Development of Men

By EDWIN GRANT CONKLIN

Professor of Biology in Princeton University

"The lay reader cannot fail to be interested in the wonderful array of post-Darwinian achievements in biology which are here marshalled in such a clear way; and the biologist familiar with the detailed discoveries to which mere reference is made by way of evidence or illustration, will profit much by the survey of a whole field in well-balanced perspective. The general reader, who gets from current literature quite contradictory and often distorted views as to the undertakings and the possibilities of the eugenics movement, will here find a correct and sane inventory of both."—*Science*.

"The book is marked by sound judgment, firmness and clearness of treatment, and a vigorous buoyancy. It is to be strongly recommended to those who wish to understand the facts of human development in their relation to the larger problems of human life. The volume is well got up, effectively illustrated, and provided with a carefully selected bibliography and an unusually good glossary as well as a full index."

—*Nature*.

"We have great pleasure in commending the study of these instructive and suggestive lectures to all who are interested in the problems of heredity and environment as they affect the development of animals and man."—*The Lancet*.

"For those who desire real knowledge of the important subjects of heredity and environment, Professor Conklin's book is emphatically the one to read. In hardly another treatise can be found so clear, shapely and relatively simple an outline of the essential scientific facts or so sound and inclusive a view of what the facts humanly signify."—*North American Review*.

This book [has been] adopted for use as a required text book or for collateral reading in the University of California, Agricultural College of Utah, Central Wesleyan University, Centre College, Colorado Agricultural College, Dakota Wesleyan University, Elmira College, Goucher College, Harvard University, Northwestern University, Ohio Wesleyan University, Princeton University, Syracuse University, University of Colorado, University of Illinois, University of Pittsburgh, University of Texas.

JUST PUBLISHED

Weed's Chemistry in the Home

By HENRY T. WEED, Head of Science Department, Manual Training High School, Brooklyn, N. Y.

Price, \$1.20

Devoted to the chemistry of everyday things, this new book is simple in language and in style, and suitable in subject matter for lower classes in the high school. The amount of theory included is enough to enable the pupil to understand the practical applications of chemistry in the household, and in industries producing materials in common use. Chemical processes and products are treated in such a way as to lead the pupil to make use of the knowledge he gains.
